of your **keys**

KeyConductor

"You can rely on CaptureTech for maximum protection and efficiency"

CAPTURETECH SAFEGUARDS THE INTEGRITY AND IMAGE OF ORGANIZATIONS

The management of keys is quite a challenge for companies and organizations. This can often involve direct and indirect costs. This applies to keys used in security, money transport, healthcare, hotels, car dealers, government agencies and general companies.

Key management involves the following challenges

Safety

How do I safeguard critical keys?

Efficiency

How can key management be organised to avoid loss and search time?

Liability

How can I avoid loss having major consequences?

Key Management and how it works

KEYCOPS - SAFE KEY RING

The KeyCop is a sealed or reusable 'intelligent' key ring with a barcode for one or more keys. This KeyCop enables you to securely manage the overview of key usage. It can be used in combination with the electronic key cabinet (KeyConductor) or via the CaptureTech Web Manager

Features:

- ✓ Robust and equipped with a durable barcode
- ✓ The most modern Ultra High Frequency (UHF) RFID technology
- ✓ Safe and robust cable or metal bracket
- ✓ Variety of colours
- ✓ Can be personalised with a logo or company name

Advantages:

- ✓ Increased safety awareness and discipline
- ✓ For long and reliable use
- ✓ Fixed or frequently changing keys
- ✓ For key bunches of one to 15 keys
- ✓ Simple and quick return

HOW DOES IT WORK?

The KeyCop uses different technologies

A unique number is engraved on the KeyCop with a laser as a barcode and readable number. In theory, a person would be able to read this number during the manual issuance and collection of keys. The use of barcode scanners increases the speed considerably. The identification number is also stored on the internal RFID tag of the KeyCop. This allows you to identify the KeyCop using different techniques: reading the number, scanning the barcode or 'reading' the number electronically with an RFID reader.

KEYCONDUCTOR - SECURE AND EFFICIENT STORAGE OF 12 TO 6,000 KEYS

In addition to a secure and robust KeyCop, electronic storage is also of great importance. CaptureTech has developed the KeyConductor specifically for this purpose, which meets the most stringent requirements for each user.

CaptureTech has a range of standard solutions for the electronic management of 24 to 6,000 keys or key bunches.

The KeyConductor works with fixed key positions (barcode) or variable key positions (RFID). The latter is used for large installations where users can pick up or deliver many KeyCops at the same time. The pick-to-light functionality ensures a simple and flawless operation. Clear color markings indicate which KeyCop should be taken and at which position the key should be returned.

You can choose a configuration that fits the application and operational process of your organization. The KeyConductor is designed on the basis of horizontal 'blades'. A blade is a module with KeyConductor Technology and comprises 12 positions for KeyCops. Cabinet size and number of blades can be entered as required and the system is easy to expand.

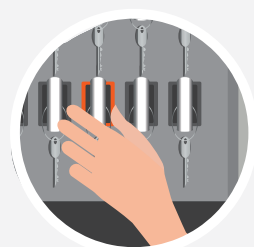

TOUCHSCREEN OR KEYPAD

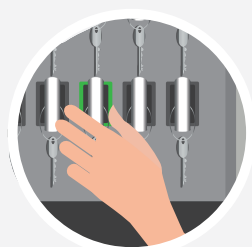

Safe and simple operation by pick to light and barcode

Issuance: Sign in to the cabinet - key selection - door opens - KeyCop position is unlocked and turns orange - take the KeyCop

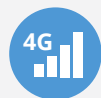

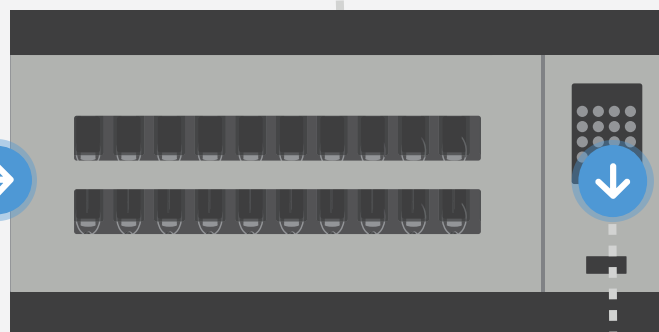

Return: Via barcode scan, after which the KeyCop position is indicated

Issuance

Return

Login options - smooth and secure issuance and collection

A simple and flawless operation requires optimal access to the KeyConductor.

SOFTWARE - AUSER-FRIENDLY AND COMPLETE WEB APPLICATION

A user-friendly software is indispensable in guaranteeing an optimal functioning of the system. The CaptureTech WebManager is designed to manage keys and provide a complete audit trail.

Advantages:

- ✓ Easy management of users and KeyCops
- ✓ Secure and real-time audit trail
- ✓ Central management of multiple KeyConductors
- ✓ Alerts and speedy reporting

CaptureCloud offers the option of having the CaptureTech WebManager hosted by CaptureTech. You do not have to set up your own server and only need a web browser and internet connection to use the application.

Advantages:

- ✓ No own server and server management
- ✓ Always available
- ✓ Always reachable
- ✓ Simple service and support possible

OTHER PLATFORMS: WORK FROM WITHIN YOUR EXISTING APPLICATION

As an efficient user, you want to work from existing applications and platforms. This enables you to use existing data such as users and products. CaptureTech can be easily linked to different applications and platforms using an API. The CaptureTech WebManager is then fed from an external system and connects flawlessly to the KeyConductor

Advantages:

- ✓ Work from existing and well-known applications and platforms
- ✓ Automatic linking of users and products
- ✓ Two-way traffic for issuance and return

COMBINATION WITH THE CAPLOCKER - ASSET MANAGEMENT

As a user of the CaptureTech WebManager, you can also manage your company's assets in a fast and efficient way. With CapLocker, you know who took what, when, and if it was returned on time. The CapLocker can be used for high risk and/or valuable resources such as laptops, payment terminals, mobile phones, scanners, weapons or tablets. In addition, your employees can safely store their personal belongings. It can also be used as an IT Service Station.

Where the CapLocker optimizes the management of assets, the CombiLocker combines both key and asset management, enabling you to achieve even more cost savings.

For asset management, CaptureTech also offers the option of deploying a reservation module. Users reserve a product through a Web App and collect it with a QR code.
