Honeywell Announces the SRX3 High Noise Dual Cup

Honeywell is pleased to announce the launch of the SRX3 High Noise Dual Cup.

A dual cup headband is now available for the SRX3 devices. This allows workers to hear voice directions generated by a voice-directed or voice-guided workflow clearly and has an increased capacity, compared to the single cup headband (HD-1500-113), to reduce user noise exposure by including a cup on each ear. Using Test Standard ANSI S3.19-1974, the SRX3 Dual Cup headset was determined to have an NRR of 12 dB.
